**Summary:** The invisible, eternal force shapes our visible reality, much as the roots sustain a tree. Reality extends beyond our sensory perceptions, profoundly supported by unseen forces such as gravity and subatomic particles. Although these energies are not visible, we can feel their effects in every aspect of our lives. Likewise, while thoughts themselves may be intangible, they exert a powerful influence on our behaviour and decisions. It is crucial to recognise that just because something is not visible, it does not diminish its existence or significance; the absence of sight does not imply the absence of reality.

Not even with a speck of impurity, beyond contamination, like a fragrance, the omnipresent force is seated within. This highlights the intangible attributes of the life force that support its tangible attributes.

No one has seen it emerging who can truly know its origin, fellow beings? (1)

Who can describe or understand the all-pervading force which is without any lineage, fellow beings? (1)(Pause)

It is akin to the path of a bird flying through the sky that is untraceable.

Like a fish swimming through water, its trail remains unseen. (2)

Namdev says his beloved is the omnipresent force, the one who manifests in all three realms of creation; this signifies that the energy that creates, sustains, and disintegrates is present in every element of existence. (3)(2)

**Essence:** Bhagat Namdev reflects on an indescribable force that creates, sustains, and dissolves everything beyond our sensory perception. This unseen power animates every aspect of creation, gliding silently through existence like a bird in the sky or a fish in the water. He states that this energy may appear distant, but it is always present within and around us, like a beloved companion.
